## 8.1 Review Questions

### 8.1.R1

1/1 point (graded)

Using the decision tree on page 5 of the notes, what would you predict for the log salary of a player who has played for 4 years and has 150 hits?:

☒ 5.11

☐ 5.55

☐ 6.0

☐ 6.74

#### Explanation

The player has played less than 4.5 years, so at the first split we follow the left branch. There are no further splits, so we predict 5.11.
