6.R Review Questions

6.R.R1

1/1 point (graded)

One of the functions in the glmnet package is cv.glmnet(). This function, like many functions in R, will return a list object that contains various outputs of interest. What is the name of the component that contains a vector of the mean cross-validated errors?

| cvm |

✔ **Answer:** cvm

Explanation

To check the return value of a function, use ?functionname and then scroll down to the Value heading.
